

## **INSTRUCTIONS FOR USE:**

**HOW MUCH:** Use the measuring cup to determine exact dosage based on pond water volume. One cup treats approximately 3,000 gallons (11,340 liters).

**CALCULATE POND SIZE:** Length (feet) x Width (feet) x Average Depth (feet) x 7.48 = US Gallons

**HOW OFTEN:** For first time use or poor water conditions, add a double dose weekly for two weeks, then add a single dose weekly for maintenance.

**HOW TO:** Mix with warm water (about 80°F/26°C) in a clean bucket to activate. Then, immediately pour around the perimeter of the pond or stream. Water may temporarily appear cloudy, depending on the pH of the pond.

**PLEASE NOTE:** Do not add directly to the pond in granular form. Please ensure pond is properly aerated during application. We recommend the use of a strong air pump or aeration system. **Keep out of reach of children.** Store at room temperature.
