```

Instructions

Input a radius to search within in KM or miles. Click on the map or type in an address or Canadian post code on the center of your search. After a delay, the results will appear in the text box. If there are fewer than 5000 post code results, they will also be shown on the map. If you hover over a marker, you will see it's postal code.

You can find a comma separated list of the post codes in the large text box below the map.

There is a limit to the radius because excessive results can take a long time to load and some web browsers struggle to load them all.
